ZAMBIA GOLD DEVELOPMENT PROPOSAL

Inclusive development.
Safer mining.
Cleaner processing.
Modular expansion.

Operating partner: KSGM (ASR Operator)

A PRACTICAL PLATFORM FOR RESPONSIBLE GOLD DEVELOPMENT

A Zambia-focused opportunity

African Sky Resources (ASR) proposes a collaborative approach to gold development in Zambia, delivered through operating partners such as KSGM's experienced mining teams and project-specific mobile processing specialists.

SAFE OPERATIONS

Introduce disciplined mine planning, controlled processing, access control, trained operators and stronger occupational safety practices.

ENVIRONMENTAL CONTROL

Bring processing into an engineered footprint with managed reagents, water, waste, rehabilitation and monitoring rather than uncontrolled recovery practices.

LOCAL VALUE CREATION

Support formal production, skills transfer, employment, local procurement, traceability and legitimate routes to market.

The objective is a scalable, ASR-led operating platform that complements Zambia's formalisation, value-addition and responsible-mining priorities.

ASR-led, professionally operated

ZAMBIAN PARTNERS

Government & rights holders

- Cooperatives and ASM groups
- Relevant government authorities
- Licence and mineral rights holders
- Host communities

Partnership & licence agreements ⟷

AFRICAN SKY RESOURCES (ASR)

Project sponsor & developer

- Deal origination and structuring
- Project Coordination
- Government and rights-holder interface
- Governance, standards and reporting

Operating agreement ⟷

KSGM – ASR OPERATOR

Operator & project manager

- Mine planning and execution
- Mobile processing plants
- Operations and maintenance
- Site safety and environmental management

ASR holds the project, the capital and the Zambian relationships. KSGM, as the ASR Operator, operates and manages the project(s) on ASR's behalf.

Why the concept fits Zambia

FORMALISATION

Zambia's ASM Directorate identifies formalisation, technical support, occupational safety, health and environmental protection as core functions. Mobile plants can provide a practical processing platform around which compliant operations can be organised.

VALUE ADDITION

The Ministry promotes mineral value addition and is developing mineral market centres and processing hubs. A modular plant model can extend processing capability closer to suitable mineral and more specifically gold-producing areas.

ENVIRONMENTAL PERFORMANCE

Zambian processing licence requirements include environmental management, pollution prevention, waste treatment, land and water protection and rehabilitation. ASR will require these controls to be designed into each deployment.

Strategic alignment shown here is based on current public information from Zambia's Ministry of Mines and Minerals Development and ZEMA.

Operating capability ASR brings to Zambia

GOLD

KSGM's recent operating experience includes Pitana & Syd in Zimbabwe and Krugersdorp gold operations in South Africa.

MINING

Practical mine start-up, contractor management, production planning, grade control and site execution.

PROCESSING

Crushing, milling, beneficiation and gold recovery capability, supported by modular plant concepts.

LOGISTICS & MARKETING

Experience moving and marketing mineral products across Southern African road, rail and port systems.

Experience beyond gold strengthens delivery

- IRON ORE
- MANGANESE
- CHROME
- COAL
- ANTHRACITE
- COPPER
- RARE EARTHS
- GOLD

This wider experience matters: reliable gold operations depend not only on metallurgy, but also on mining discipline, maintenance, materials handling, logistics, security, procurement and market execution.

The mobile gold processing platform

Representative KSGM mobile processing plant

PROJECT-SPECIFIC

Modules and flowsheet are configured around ore characteristics, site conditions and required controls.

MOBILE & MODULAR

The concept is transportable and can reduce the need for extensive permanent infrastructure at an early stage.

INTEGRATED CONTROL

The mobile plant concept, deployed and operated by KSGM on ASR's behalf, includes assay capability, access control, CCTV, GPS tracking, Wi-Fi and remote data capture.

Integrated recovery in a controlled footprint

The mobile plant concept, operated by KSGM for ASR, combines the core recovery stages in one managed system. For Zambia, each installation would be subject to ore test work, detailed engineering and applicable approvals before deployment.

The aim is repeatable metallurgical control rather than informal, dispersed and difficult-to-monitor processing.

Making gold operations safer

CONTROLLED ACCESS

Defined plant perimeter, access control and CCTV improve control around processing and gold handling.

TRAINED OPERATORS

Standard operating procedures, competency training and supervision replace ad-hoc processing practices.

ENGINEERED EQUIPMENT

Purpose-designed crushing, milling and recovery equipment reduces reliance on improvised processing methods.

ASSAY & RECONCILIATION

On-site assay and production reconciliation improve operational decision-making and accountability.

MAINTENANCE DISCIPLINE

Planned inspections, preventive maintenance and critical spares support safer, more reliable operations.

EMERGENCY PREPAREDNESS

Site-specific emergency response, chemical handling, PPE and incident controls form part of mobilisation.

Environmentally responsible processing

WATER MANAGEMENT

Design for controlled water use, containment, recycling where practical and protection of surrounding water resources.

REAGENT MANAGEMENT

Controlled storage, dosing, handling and monitoring of process reagents within an engineered operating system.

WASTE & TAILINGS

Defined handling and disposal strategy based on test work, site conditions and Zambian environmental requirements.

SMALLER FOOTPRINT

Mobile and modular layouts can limit unnecessary permanent infrastructure and support staged development.

REHABILITATION

Progressive rehabilitation and closure planning can be incorporated from the beginning of the project.

MONITORING & RECORDS

Digital operating data, inspections and environmental records strengthen oversight and compliance reporting.

A tool for formalisation and traceability

01 ORE SOURCE

Identify licensed source and record origin.

02 RECEIVING

Controlled weighing, sampling and lot identification.

03 ASSAY

Transparent grade determination and quality control.

04 PROCESS

Managed recovery through a defined flowsheet.

05 RECONCILE

Mass balance, recovery data and gold accounting.

06 MARKET

Legitimate, documented route to approved buyers and channels.

Potential deployment models for Zambia

DEDICATED MINE PLANT

Deploy a project-specific plant at a licensed ASR or partner gold operation, integrating mining and processing under one operating system, with KSGM as operator.

REGIONAL PROCESSING HUB

Locate a modular plant to serve suitable licensed ore sources in a defined district, subject to mineral rights, processing licences, environmental approvals and commercial arrangements.

COOPERATIVE / ASM SUPPORT

ASR to partner with government, licence holders or cooperatives to introduce technical support, safer processing, training, traceability and formal market access.

The preferred model would be selected jointly by ASR, the relevant Zambian authorities and rights holders after technical and regulatory review.

Local participation and skills transfer

ASR will require its operator, KSGM, to:

- Prioritise recruitment and practical training of Zambian operators, artisans, supervisors and technical staff.
- Use local contractors and suppliers where commercially and technically suitable.
- Develop plant operating, safety, environmental and maintenance competencies through structured on-the-job training.
- Create clear procedures for ore receiving, sampling, assay, security and gold accounting.
- Support cooperative and small-scale miner capacity building where a project is structured around formalised ASM.
- Build a model that can ultimately be operated with a strong Zambian management and technical base.

Proposed path to a Zambian pilot

1	**GOVERNMENT & STAKEHOLDER ENGAGEMENT**	ASR to identify the priority gold area, rights-holder structure and development objectives.
2	**SITE & ORE REVIEW**	Geology, sampling, metallurgical test work, water, access, power and community context.
3	**REGULATORY PATHWAY**	Confirm mining and processing rights, ZEMA requirements and site-specific approvals.
4	**PILOT ENGINEERING**	ASR and KSGM configure the mobile plant, environmental controls, security, staffing and operating procedures.
5	**DEPLOY & DEMONSTRATE**	Commission a controlled pilot and measure safety, recovery, environmental and operating performance.
6	**REPLICATE RESPONSIBLY**	Use verified results to consider expansion or deployment to additional suitable areas.

Joel

Joel

KSGM – Corporate Development & Investment

Joel is a South African-qualified lawyer with 25 years of international experience in mining finance, mergers and acquisitions, and business and corporate development. He was a founding member of Atlatsa Holdings in 2002 and was instrumental in the reverse takeover of Atlatsa (previously Anooraq Resources Corporation) in 2004. From 2005 to 2014 he served as Atlatsa's Chief Commercial Officer, responsible for corporate and business development, strategy, corporate finance and corporate communications.

In 2016 he co-founded the Tomahawk Investment Group, a multi-family office finance and advisory firm with a diversified portfolio of high-growth businesses, including DriWay Technologies, where he serves as Global Chief Business Officer. As part of ASR's operating partner, Joel supports corporate development, investment structuring, strategic partnerships, project finance, M&A and commercial execution.

Joel holds a Bachelor of Commerce (Honours in Economics) and an LLB from the University of Cape Town.

Hilton

Hilton

KSGM – Legal & Commercial

Hilton is a South African-qualified corporate lawyer with wide-ranging commercial experience, and a former senior partner of Mallinick Ress Richman & Closenberg Attorneys. He has since held various commercial positions focused on litigation, M&A and commercial legal matters relating to JSE listings. He spent several years with the Pan African Group of Companies, a Black Economic Empowerment corporation, gaining valuable insight into the mining industry.

In 2016 he co-founded the Tomahawk Investment Group, a multi-family office finance and advisory firm with a diversified portfolio of high-growth businesses. As part of ASR's operating partner, Hilton supports legal structuring, commercial agreements, governance, regulatory interfaces, transaction execution and the contractual frameworks for mining and processing projects.

Hilton holds a BProc from the University of the Witwatersrand.

Faan

Faan

KSGM – Technical Director

Faan is Technical Director of KSGM, ASR's operating partner. His focus is mining and logistics execution, covering the planning, design, build-out, supervision and management of mining projects across Africa, from greenfield development through to steady-state operations.

Over the past 20 years, Faan has been responsible for executing mining projects in both precious and bulk commodities across South Africa, Zimbabwe, the Democratic Republic of Congo, the Republic of Congo and Guinea. His practical experience covers project mobilisation, mine development, operational management, materials handling and logistics.

On the ASR Zambian project, Faan leads technical execution and implementation, ensuring that project design, mining activities, logistics and operational systems are practical, scalable and suited to African operating conditions.

Stephan

Stephan

KSGM – Mining & Processing

Stephan is a mining professional with more than 20 years of experience in underground and open-pit mining, mineral processing and project management across Africa. His expertise includes feasibility studies, mine and processing plant development, cost optimisation and turning around underperforming operations. He has worked across gold, platinum group metals, chrome, diamonds, iron ore and manganese.

On the ASR Zambian project, Stephan's experience is applied directly to gold mining and processing, including ore characterisation, processing flowsheets, plant configuration, commissioning, operational optimisation and the deployment of project-specific mobile processing solutions.

His experience is particularly relevant to ASR's proposed Zambian model, where mobile plants provide a controlled platform for safer, more efficient and environmentally responsible gold recovery, while supporting formalisation, traceability and local operating capability.

Grant

Grant

KSGM – Investment & Corporate Development

Grant spent several years as a management consultant with Bain & Company, focusing on private equity transactions across sectors including natural resources in the EMEA region. In 2021 he co-founded Energy Revolution Ventures, an early-stage energy technology venture capital firm.

As part of ASR's operating partner, Grant supports investment analysis, corporate development, strategic transactions, and the evaluation and structuring of mining and processing opportunities. His private equity and natural resources transaction background adds further commercial and investment capability to the project.

Grant holds a Bachelor of Commerce (Honours in Finance & Accounting) from the University of Cape Town and completed a postgraduate course in Mining Engineering at the University of the Witwatersrand, with distinction.

A practical platform for responsible gold development

ASR believes Zambia presents an opportunity to combine experienced African mining execution, through operating partner KSGM, with project-specific mobile gold processing technology to support safer, more controlled and environmentally responsible operations.

SAFE & CONTROLLED	Engineered processing, trained operators, security, assay and disciplined operating procedures.
ENVIRONMENTALLY RESPONSIBLE	Water, reagent, waste, rehabilitation and monitoring controls designed into each project.
MOBILE & SCALABLE	Project-specific modular plants that can be deployed, adapted and expanded as projects develop.
LOCAL CAPABILITY	Zambian employment, skills transfer, local procurement, formalisation and transparent gold production.

PROPOSED NEXT STEP

ASR to engage with the relevant Zambian authorities and project stakeholders to identify a suitable pilot opportunity, complete technical and regulatory due diligence, and, with KSGM as operator, configure a mobile processing solution for the selected orebody and site.

ASR is ready to work collaboratively with Zambia to develop a demonstrable model for safe, traceable and responsible gold production.
